

CABI Animal Science Collection

The complete online animal science information resource

Animal Science Collection by CABI covers all aspects of animal science, from genetics to animal production and welfare.

CABI, an international not-for-profit organisation with a foundation in science and publishing for over 100 years, also has a rich history in practical development projects using profits from publishing products and donor funds to work with farming communities worldwide to improve their livelihoods and help provide food for an ever-growing population. The Animal Science Collection is a comprehensive database of animal science research including 3.4 million records on a wide variety of animal species including economically important farmed animals (including fish) as well as equines, companion animals, zoo animals, and laboratory animals, meeting the needs of animal science professionals throughout their career, from student to researcher and those working in industry.
